

MONOPOD V2

Manual

Package contents

The Bushman Monopod V2 includes a simple reliable kit for your 360 camera:

1) **Counterweight 400g:** is for the stability of the camera on the monopod. ¼" thread on both ends.

2) **Bushman Monopod v2:** open to a length of 154cm. ¼" thread on both ends.

3) **Jade Tripod:** is a 2 position tripod. Lower position is the one that we strongly recommend for stability. The upper position should not be used in the windy conditions. Please note that in the upper position it is not always horizontal.

How to work with the Bushman Monopod v2:

1) **Bushman Monopod:** With one hand grab all lock and turn them 1/3 of a turn to open them. Pull all sections of the pole to the length that you need. Then each lock turn 1/3 of a turn in the other direction to lock them in place.

2) **Jade Tripod:** The tripod has two possible positions. For stability we recommend using the lower position of the tripod. The top ring of the tripod can turn to lock or unlock the tripod legs. With time you might find that the tripod legs will get loose. They can be tightened with an Allen Wrench.

3) **Assembling** The classic way of assembling in: Tripod+CW+Monopod.

4) **Extra Counterweight.** Feel free to add extra counterweight if you want to increase the stability.

5) **Camera:** you can screw on your 360 cameras on the ¼" thread on the top of the pole.

MONOPOD V2 BUNDLE

Package contents

If you purchased the Monopod V2 in full equipment (BUNDLE), the package also includes:

- 1) Aluminum five-piece telescopic pole, length when open 154 cm, when folded 39.5 cm, thread 1/4" thread for connecting accessories.
- 2) Monkey Clamp - universal handle for an easy fixing of small 360° cameras. Maximum opening 4 cm, rubber protection, size 50 x 60 x 18 mm. It has a female 1/4" and 3/8" threads.
- 3) Tripod - tripod with two opening positions - lower wider opening for flat surface, higher position for uneven surface.
- 4) Popeye - neodymium rubber magnet with a 1/4" male thread, pull force up to 45 kg, diameter 90 mm.
- 5) The Camea 1/4" holder screws on directly under a camera and allows you to attach it to a strap.
- 6) Ground spike - with 1/4" and a 3/8" thread for screw the camera directly on it, length 12 cm, load capacity 3kg.
- 7) 1/4" spacer - aluminum adapter for more space between the camera and the pole or the light. With 1/4" male on the top and 1/4" female on the bottom, total length 55 mm.
- 8) Counterweight - weight 400 g, with 1/4" male on the top and 1/4" female on the bottom to connect to any photo accessories. Possibility to connect weights on top of each other or to any tripod leg.
- 9) Additional counterweight - weight 300g.
- 10) Bushman lanyard

Thanks to the Bushman 360 Bundle V2 accessory, the telescopic pole can be used without a tripod, for example with the use of Ground spike, which leads directly into the ground; or with a Popeye magnet that can be attached to any magnetic material (such as a car body); or with the Monkey Clamp, which we attach to any object up to 4 cm in size (bicycle or motorcycle handlebars).
